CS 408 LAB 1 VISIUAL PROGRAMMING

27 Feb, 2026

Note: Plagiarism will result in a grade of zero for the assignments. Late submissions will not be considered. Submit single text file as guided in Class. Place All codes in text file. File name must be Name_AGNumber

Problem 1: Write a program that two integers and outputs the largest.

Problem 2: Write a program that three integers and outputs the largest.

Problem 3: Write a program that two integers and outputs them in increasing order.

Problem 4: Write a program that three integers and outputs them in increasing order.

Problem 5: Write a program that two integers and outputs the smallest.

Problem 6: Write a program that three integers and outputs the smallest.

Problem 7: Write a program that two integers and outputs them in decreasing order.

Problem 8: Write a program that three integers and outputs them in decreasing order.

Problem 9: Write a program that three integers and prints the average of these.

Problem 10: Write a program that the score of a student in a subject and displays his grade according to the following criteria:

Score	Grade
>= 90	A+
80 – 89	A
70 – 79	B
60 – 69	C
50 – 59	D
< 50	F

Problem 11: Write a program that reads the user's age and then outputs "You are a child." if the age < 18, "You are an adult." if age < 65, and "You are a senior citizen." if age >= 65.

Problem 15: Quadratic Equation can be represented as**"**

$$ax^2 + bx + c = 0$$

Find the values of the x using following formula

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}.$$
